

NAFIZ IMTIAZ KHAN

Davis, California, United States

nikhan@ucdavis.edu | (+1)530-220-8037 | nafiz43.github.io/ | linkedin.com/in/nafiz43/ | github.com/Nafiz43

Career Objective

I am a PhD candidate in Computer Science at UC Davis, advised by Professor Vladimir Filkov. My research focuses on open-source software sustainability, health informatics, and applied data science. I specialize in fine-tuning deep neural networks, large language models, building agentic retrieval-augmented generation (RAG) systems, and developing task-specific AI/ML pipelines.

Education

University of California, Davis

PhD in Computer Science | MSc in Computer Science (2025)

Master's degree conferred July 2025, CGPA: 3.91/4.00

September 2023 - Present

California, United States

Technical Skills

Programming Languages: Python, C/C++, Java, JavaScript, PL/SQL, Typescript, HTML / CSS, Bash

Frameworks/Libraries : PyTorch, Keras, Tensorflow, LangChain, Scikit-learn, Pandas, NumPy, Matplotlib, BeautifulSoup, Pyvis, Node, React

Tools/Platform: Ollama, Flask, Git, AWS Bedrock, Google Colab, GCP, Docker, Kubernetes, Grafana, Selenium, Tableau, Microsoft Azure, JIRA

Database: ChromaDB, FAISS, MongoDB, FireBase, MySQL, Oracle, SQLite, Neo4j

Professional Experience

Artificial Intelligence Intern

BetterHelp

June 2026 - Present

San Jose, California, United States (Remote)

- Contributing to AI/ML initiatives as part of the Artificial Intelligence Intern team at BetterHelp.

Human Frontier Collective Specialist – GenAI (Internship)

Scale AI, Inc.

Aug 2025 – Sep 2025

Remote – California, United States

- Designed and critiqued complex, domain-specific problem sets to rigorously test cutting-edge generative AI models, identifying limitations and refining performance.
- Collaborated with Scale researchers in interdisciplinary sessions to analyze model behavior, shape AI research directions, and explore experimental applications.

Graduate Student Researcher

University of California, Davis

September 2023 - Present

California, United States

- Developed **AngioVision** (<https://github.com/Nafiz43/AngioVision>), an LLM-powered angiography report generation and validation pipeline; fine-tuned a framework integrating a **CLIP** alignment module, embedding, and decoder layers, achieving a **10% F1 gain** over the prior SOTA, **Claude 4.6**.
- Led the end-to-end development of **RepoWise** (<https://repowise.github.io/RepoWise-website/>), a domain-aware RAG system for OSS governance analytics; demonstrated 84% accuracy on factual queries and superior performance over general-purpose LLMs (GPT-4o, Claude 4.5 Sonnet) in both factual and non-factual repository tasks.
- Spearheaded the development of the **OSSPREY** (<https://oss-prey.github.io/OSSPREY-Website/>) tool to assess the health of open-source projects, as measured by real-time analytics generation with an average latency of 3.5s and 124MB memory usage per project, by integrating **Vue.js** (frontend), **TensorFlow** (deep learning), and **LangChain & Ollama** (LLM inference pipeline design)
- Developed **ReACT-GPT** (<https://github.com/Nafiz43/ReACT-GPT>), an LLM-and-RAG-powered framework for extracting actionable insights from scientific articles, achieving a 75% BERTScore, by integrating **LangChain** (orchestration), **ChromaDB** (retrieval), and **Ollama** (lightweight LLM inference)
- Developed **EvidenceBot** (<https://nafiz43.github.io/EvidenceBot/>), a privacy-preserving RAG tool for querying and extracting insights from a diverse set of documents, built using **Streamlit** and powered by the **ReACT-GPT** framework
- Developed **PCL-Fetcher** (<https://nafiz43.github.io/PCL-Fetcher/>), an LLM-powered pipeline that automates procedural case log documentation from radiology reports, achieving an 86% F1Score—exceeding the crosswalk benchmark by over 13%
- Developed **MammoGen-RAG** (<https://github.com/Nafiz43/MammoGen-RAG>), a multi-modal RAG pipeline that leverages Vision-Language Models (VLMs) to automate mammography report generation, achieving a 90% F1score through integrated visual and textual reasoning
- Enhanced the performance of foundational language models in **LLM-as-Developers** (<https://github.com/zeerakb1/llm-developers-evaluation>) project by 10% (BERTScore) on answering StackOverflow questions through strategic fine-tuning techniques (**PEFT** and **QLoRA**)
- Developed and optimized **Transformer** and **LSTM-based** models for forecasting the sustainability of Open Source Software (OSS) projects (<https://github.com/OSS-PREY/OSSPREY-Pex-Forecaster>), achieving an 8% improvement in F1Score over SOTA

Software Engineer

Center for Advanced Computing Research (CACR)

July 2022 – August 2023

Dhaka, Bangladesh

- Developed the **AFMC Admission Test** Module, a software solution for the AFMC Entrance exam, utilizing **Node.js**, **Bootstrap**, and **MongoDB** to generate unique randomized questions for 30,000 candidates and automate the evaluation and ranking process
- Spearheaded a team to develop **C-Archive** using **PHP**, **MySQL**, and **Bootstrap** to store ongoing events of the department [[GITHUB](#)]

Award & Honors

- **Champion** in the the **Medical Robotics Challenge for Contagious Diseases**, organized by **Imperial College London** [[REF](#)]
- **Champion** in the Creative App Contest of the **Tri Robo Cup Championship** organized by the **MIST Robotics club** [[REF](#)]
- **3rd runner-up** at **COVID-19 Combatants Unification Competition**, organized by **IEEE Bangladesh Chapter** [[REF](#)]
- **Top Downloaded Article Award** - in the year 2021, and 2022; provided by **Engineering Reports Journal - Wiley**
- **GGCS Summer Ph.D Fellowship** - 2024, awarded by Graduate Group of Computer Science, UC Davis
- Recognized for academic excellence at MIST, achieving placement on the **Dean's List of Honor** and receiving the **Merit Scholarship** in 2018, 2019, and 2020
